DETAILED ACTION

Drawings

Figures (1 and 2) should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claim 7 is objected to because of the following informalities: "claim 1" should correctly be -- **claim 6** --. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al. (4,229,619).

Regarding claims 1, 6, Takahashi et al. (Fig. 1) disclose a multi way speaker system includes an amplifier comprising: a signal input connection (10), a power amplifier (12) which amplifies a signal coupled in by way of the signal input connection, filters (14, 16, 18) formed a passive frequency divider which divides the signal amplified by the power amplifier into at least two channels, and at least two electroacoustic transducers (24, 26, 28) or at least two output connections for electroacoustic transducers which are each connected to a respective channel made available by the frequency divider, see col. 2, lines 4-27), wherein a passive negative feedback (34, 36, 38) is provided between at least one output of the frequency divider and the input of the power amplifier (12).

Regarding claims 2, 7, wherein the power amplifier is in the form of a differential amplifier (12) and the signal input connection is connected to the first input (+) of the differential amplifier and at least one channel made available by the frequency divider and preferably all channels are connected by way of a respective ohmic resistor to the second input (-) of the differential amplifier (12).

Regarding claims 3, 8, wherein the resistance values by way of which the channels made available by the frequency divider are connected to the second input (-) of the differential amplifier are different.

Regarding claims 4, 9, wherein the second input of the differential amplifier is connected to earth by way of an ohmic resistor (34, 36, 38).

Regarding claims 5, 10, wherein the second input of the differential amplifier is connected to earth by way of an ohmic resistor (34, 36, 38).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Yen (5,399,986); Kim (5,530,770); Su (6,674,866)) show further analogous prior art circuitry audio amplifier having multiple speakers.
